

*A Resort like no other*

## Environmental Policy

Vivosa Apulia Resort is aware that tourist reception facilities can exert a certain pressure on water resources, energy sources and threaten local biodiversity due to inadequate waste management. In our case, given the proximity to the coast, which is an environment particularly sensitive to anthropogenic impacts, we undertake to conduct our activities in harmony and respect for the natural environment, thus seeking to ensure the community with greater guarantees of environmental protection. Particular attention is paid to reducing water consumption, considering the emergencies in supply that have occurred with increasing frequency in recent years, especially in Southern Italy.

Management therefore aims to achieve environmental objectives and goals that allow for a constant improvement in environmental efficiency.

The principles that we are committed to upholding to ensure respect for the environment are:

- ~ Pollution prevention and minimization of environmental risks related to hotel activities and services, by means of every possible organizational, operational, and technological effort.
- ~ Maintain compliance of all activities over time to national, regional and local laws, regulations and indications.
- ~ Training activities, update information for all personnel on the importance of protecting the environment, and in order to increase awareness and responsibility that every action has a consequence on the environment.
- ~ Promote the adoption of correct environmental behaviour by suppliers and companies working on behalf of the organization, encouraging them, where necessary, to continuous improvement and more effective choices for the purpose of pollution prevention.
- ~ Utmost communication, transparency, and awareness directed to the local community and customers on environmental issues to obtain and consolidate trust in the activities and services offered by the structure, as well as for an advantageous exchange of suggestions and advice aimed at improving the environmental performance of the hotel without, however, compromising the needs of our customers.
- ~ Ensure the commitment of all in identifying problems relating to environmental management, their control, and the possible implementation of protective actions.
- ~ Utilisation, where possible, of eco-compatible products.
- ~ Implementation of as much as it is possible of a water saving policy, without prejudice to the comfort conditions provided by the structure.
- ~ Implementation of as much as it is possible of an energy saving policy, without prejudice to the comfort conditions provided by the structure.
- ~ Implementation of a policy aimed at separate collection of waste within the facility, and related awareness promotion to suppliers.
- ~ Photovoltaic system covering the parking lots with a power of 499.50 KW.
- ~ Electric cars recharging stations.
